

ARMY SERVICE FORCES CATALOG **QM7-MISC 3**

Ref. TM 10-400 and TB 10-400-1

QUARtermaster SUPPLY CATALOG

Organizational Spare Parts for
**Stove, Cooking, Gasoline,
M1942, One-Burner, Modified:
QM Stock No. 65-H-2881**

1. The Quartermaster Supply Catalog of the Army Service Forces Catalog is published in eight separate sections. The sections listing *spare parts* peculiar to each item of standard quartermaster equipment are as follows:

Section QM7: Organizational Spare Parts.

Section QM8: Higher Echelon and Depot Spare Parts.

2. Each pamphlet of Section QM7 and Section QM8 is identified by a symbol in the upper right hand corner of the outside front cover. Each symbol consists of one of the following sets of letters followed by a number. The number facilitates identification of each pamphlet in the index section of the Quartermaster Supply Catalog, which is Section QM2:

MHE (Materials Handling Equipment).

SPV (Equipment Installed in Special Purpose Vehicles).

PHE (Petroleum Handling Equipment).

MISC (Miscellaneous Equipment).

3. Section QM7, Organizational Spare Parts: Pamphlets of Section QM7 list the spare parts, accessories, tools, and supplies furnished with each item of equipment, and indicate allowances of organizational spare parts authorized organizations.

4. Section QM8, Higher Echelon and Depot Spare Parts: Spare parts listed in pamphlets of Section QM8 are *for guidance* in establishing

Headquarters Army Service Forces 4 Aug. 1944

[QM7-MISC 3]

quantities of such parts to be issued to supply installations and organizations. Quantities of higher echelon and depot spare parts issued will be adjusted to accommodate existing conditions, and to conform to actual usage of each item as reflected by periodic and systematic analyses of replenishment requisitions. Depot spare parts are listed by time periods and quantity groups in pamphlets of Section QM8 to establish a basis for determining initial authorized stock levels. Theaters will continually adjust quantities of each spare parts item established as the theater depot stock level, by analyzing at regular intervals the trend of detailed actual usage disclosed by replenishment requisitions. This procedure will be followed in order to maintain, accurately, current levels of supply established for each item of spare parts in accordance with prescribed oversea stock control procedures. (See TM 38-205, part III, and W. D. Cir. No. 227, 1944.)

5. Base depot spare parts as listed in Section QM8 will be used as a guide to compute quantities of spare parts to be supplied automatically as initial issues to depots in oversea theaters of operation, and as a guide for submitting replenishment requisitions based upon the period of time for which theater stock levels are established, and the number of items of equipment of each make and model to be maintained. Base depot spare parts, as listed, consist of estimated average use and replenishment requirements for fifth and lower echelons for 1 year of service of the quantity of the item of equipment indicated. (See W. D. Cir. No. 227, 1944.) Base depot stocks comprise the central source of supply of quartermaster spare parts for all echelons of maintenance and for intermediate and forward depots within theaters of operation. These stocks are normally replenished from depots in the United States through ports of embarkation.

6. Initial distribution of pamphlets of Section QM7 applying to miscellaneous quartermaster equipment is made automatically to headquarters of garrisoned posts and camps, interested troop organizations, quartermaster depots, quartermaster sections of Army Service Forces depots, ports of embarkation, and Adjutant General depots within the continental United States, and to headquarters of overseas theaters of operation. Copies are also packed with initial issues of *organizational spare parts* for applicable items. Adjutant General depots, base commands, and overseas forces are responsible for further necessary distribution to supply officers and other headquarters under their jurisdiction when required.

7. Automatic initial distribution of pamphlets of Section QM8 applying to miscellaneous quartermaster equipment is the same as indicated heretofore for Section QM7, except that troop organization distribu-

tion is limited to headquarters of divisions, and copies packed with initial issues are included only with shipments of *higher echelon and depot spare parts*. Adjutant General depots, base commands, and oversea forces are responsible for further necessary distribution of pamphlets of Section QM8.

8. Supply officers of organizations and depots are responsible for requisitioning spare parts required to maintain authorized allowances, established stock levels, and parts required for necessary repairs to disabled or worn equipment.

9. Pamphlets of Section QM7 of the Quartermaster Supply Catalog are prepared for the purpose of supplying organizations with information relative to their authorized allowance of organizational spare parts, tools, etc., for the major items with which they are equipped, or which they maintain. These authorized allowances constitute the maximum amount of spare parts which may be on hand at any one time, and will be shown in the appropriate column on Property Issue Slips and Requisitions. Replacements of spare parts up to authorized allowances will be obtained from normal sources of supply. Section QM7 will also assist organizations in estimating their load of spare parts.

10. Pamphlets of Sections QM7 and QM8 of the Quartermaster Supply Catalog will be used in preparing Property Issue Slips (W. D., A. G. O. Form No. 446), and Requisitions (W. D., A. G. O. Form No. 445). Correct nomenclature and/or stock numbers or parts numbers furnished in these pamphlets will be used by all organizations and installations for records, reports, correspondence, etc., in operations peculiar to distribution, storage, issue, and maintenance of all Quartermaster matériel. For the items required, stock numbers or parts numbers listed in pamphlets should be shown in the "Stock No." column of Property Issue Slips and Requisitions. The exact and complete nomenclature as listed in the pamphlets will be used with the unit of measure. Abbreviations will be limited to those which appear in the pamphlets. In order that Property Issue Slips and Requisitions may be edited and filled with the least possible delay, it is imperative that all pertinent information furnished in the applicable pamphlet be shown. All items appearing on each Property Issue Slip or Requisition will apply to *one major item only*. Do not combine spare parts requirements for different major items on one Property Issue Slip or Requisition.

[QM7-MISC 3]

11. Property Issue Slips are used by companies and similar units to requisition spare parts. In the zone of interior they are prepared and forwarded through channels to the post, camp, or station quartermaster property officer. In theaters of operation they are prepared and forwarded through channels to the supply officer of the appropriate higher troop organization, or to designated theater supply organizations.

12. In the zone of interior, the quartermaster property officer of the post, camp, or station requisitions spare parts listed in this pamphlet from the regional depot serving the area in which the installation is located. The requisitions are prepared on W. D., A. G. O. Form No. 445 (Requisition).

13. In theaters of operation, requisitions covering spare parts for items of miscellaneous quartermaster equipment are prepared on W. D., A. G. O. Form No. 445, and are routed to ports of embarkation. Requisitions are there edited and forwarded to appropriate depots for supply, or to Office of The Quartermaster General for administrative action and supply, depending on the control status of the items requisitioned.

14. In the zone of interior, channel of supply for spare parts listed in this pamphlet is from Army Service Forces or Quartermaster depot to post, camp, or station quartermaster property officer, who supplies using organizations.

15. In theaters of operation, channel of supply for spare parts listed in this pamphlet is from Army Service Forces or Quartermaster depot to port of embarkation, thence to the base depot, zone of communication, theater of operation. Distribution from the base depot in a theater is made in accordance with procedures established by the theater commander.

16. See figures 2 and 3 for specimen forms and additional instructions for preparing W. D., A. G. O. Form No. 446 (Property Issue Slip) and W. D., A. G. O. Form No. 445 (Requisition). For further information with respect to the preparation of these forms see War Department Circular No. 170, 1943, as amended by War Department Circular No. 39, 1944; Army Service Forces Manual M403; and Section QM1 of the Quartermaster Supply Catalog.

17. Errors noted in this pamphlet should be reported promptly to Office of The Quartermaster General, Service Installations Division, Maintenance Branch, Washington 25, D. C.
